Title :

Procedures for statutory inspection. Gas installations. Part 2: Storage and distribution facilities for bottled liquefied petroleum gas (GLP)

Scope :

The purpose of this standard is to establish a procedure to provide all the necessary instructions to perform the statutory inspections of the storage and distribution facilities for bottled Liquefied Petroleum Gases (LPG), describing the minimum safety requirements that shall be checked and the verifications to be performed by an accredited inspection body according to the current regulations.

This procedure shall be applied to the start-up inspections and periodical check-ups of those storage and distribution facilities.

Title : Rubber, vulcanized or thermoplastic — Determination of tear strength — Part 1: Trouser, angle and crescent test pieces (ISO 34-1:2022)
Scope : This document specifies three test methods for the determination of the tear strength of vulcanized or thermoplastic rubber, namely the following:
 — method A, using a trouser test piece;
 — method B, using an angle test piece, with or without a nick of specified depth;
 — method C, using a crescent test piece with a nick.
 The value of tear strength obtained depends on the shape of the test piece, speed of stretching, and temperature of test. It can also be susceptible to grain effects in rubber.

Title :

Rolling Bearings — Ceramic cylindrical rollers — Determination of the strength by notched roller test

Scope :

This document contains a method for determining the strength of cylindrical rollers made of ceramic, preferably silicon nitride (Si₃N₄) in accordance with ISO 26602, with diameters of 3 mm to 50 mm and a length to diameter ratio of 1 to 5.

The method can also be used for other diameters or materials.

The areas of application of this test method are process and material development, quality assurance, material characterization and selection, and the determination of design characteristics. The strength determined is determined under the following conditions:

- linear-elastic stress-strain behavior,
- homogeneous and
- isotropic material behavior.

Due to the defect-controlled brittle fracture behavior of ceramic materials, there is generally a significant scatter in the individual results when characterizing a series of nominally identical samples.

Title :	Reception of waste for treatment in biogas plants		
Scope :	The standard describes method for risk assessment of waste for treatment in a biogas plant, both at the waste producer and at the plant including minimum requirements for documentation for different types of waste to be treated at a biogas plant. It also clarifies roles and responsibilities between waste producers and biogas plants and specifies which parameters should be analyzed for different types of waste. This point shall be clarified with the State Administrator and the Norwegian Food Safety Authority. The standard also covers representative sampling and selection of sampling methods, control frequency based on waste type, risk assessment and supplier history and principles for determining acceptance criteria and proposals for limit values. It maps the entire process from where the waste is generated to finished products and identifies critical points and clarifying methods and parameters that are important for the quality of raw materials and finished products, for example at the waste producer, in acceptance control, rejects and finished goods.

Title :	Electric vehicle charging infrastructure. Protection System for the general power supply Line (PSL)		
Scope :	This standard is applicable to all those solutions that aim to perform the function of a "General Power Line Protection System (PSL)", as stipulated in the Complementary Technical Instruction ITC-BT-52 "Installations with special purposes. Infrastructure for recharging electric vehicles" of the Electrotechnical Regulation for Low Voltage (REBT), in order to protect the General Power Line (GPL) against overloads due to a higher energy demand from electric vehicle recharging stations than the GPL was designed.		

This standard is intended to provide guidelines and information regarding the minimum functionalities that an PSL must meet, as well as the minimum security requirements.

This standard does not define specific technological solutions that can meet these functionalities and minimum security requirements, thus enabling all possible options, such as:

- unique product dedicated to the PSL function;
- set of products and measures dedicated to the PSL function;
- home automation / building automation systems that incorporate, among others, the PSL function;
- hardware and/or software solutions;

-
- etc.

Title :	Interface for digital exchange of geographic data		
Scope :	This document provides a conceptual schema in UML notation that enables the mapping of qualitative information and general metadata (e.g. acquisition date, information about the creator) that arise during the creation (genesis) of geometric objects. This conceptual schema enables the derivation of an exchange format based on the standards of ISO/TC 211 'Geographic Information/Geomatics'. The components of the conceptual schema can be used in spatial data modelling for any subject area (e.g. documentation of natural resources, line cadastre, real estate cadastre) for which qualitative and general metadata on the creation of the individual geometric object is relevant. The focus here is on point, line and area data from the large-scale area with quality requirements, as is common in surveying, municipal administration and utility documentation.

Sector 14OCOS: Other community, social and personal services

Sector : 14OCOS (Secondary Subsector) Registration Date : 2025-12-11
 Organization : SN
 Country : Norway
 Project ID : NOT25030/0001 Project Established
 ICS : 13.030.50, 27.190
 National Ref : NS 9437
 Title : Reception of waste for treatment in biogas plants
 Scope : The standard describes method for risk assessment of waste for treatment in a biogas plant, both at the waste producer and at the plant including minimum requirements for documentation for different types of waste to be treated at a biogas plant. It also clarifies roles and responsibilities between waste producers and biogas plants and specifies which parameters should be analyzed for different types of waste. This point shall be clarified with the State Administrator and the Norwegian Food Safety Authority. The standard also covers representative sampling and selection of sampling methods, control frequency based on waste type, risk assessment and supplier history and principles for determining acceptance criteria and proposals for limit values. It maps the entire process from where the waste is

generated to finished products and identifies critical points and clarifying methods and parameters that are important for the quality of raw materials and finished products, for example at the waste producer, in acceptance control, rejects and finished goods.
