**Sector 04BUIL: Construction work**

**Sector :** 04BUIL **Registration Date :** 2026-02-26  
**Organization :** UNI  
**Country :** Italy  
**Project ID :** 01616506/0001 **Project Established**  
**ICS :** 23.040.07, 91.140.10, 91.140.30  
**National Ref :** UNI1616506  
**Title :** Methodologies for defining the energy and environmental performances of district heating and cooling systems  
**Scope :** The standard provides methodologies for defining the energy and environmental performances of district heating and cooling systems for the purposes of ARERA's regulatory activities.  
 In particular, this standard defines methods for calculating:  
 - the mix of energy vectors used for the production of thermal energy  
 - the CO2 emission factor for the production of thermal energy  
 - the conversion factor into primary energy for the production of thermal energy.  
 The standard is applicable to district heating and cooling systems that are subject to ARERA's regulatory activities.

**Title :** Heating and cooling of buildings - Climatic data - Part 1: Monthly means for evaluation of energy need for space heating and cooling and methods for splitting global solar irradiance into the direct and diffuse parts and for calculating the solar irradiance on tilted planes  
**Scope :** This standard provides, at national level, the conventional climatic data to be used for the determination of energy and hygrothermal performance of buildings, including the relevant technical systems for space heating and cooling. The standard specifies also calculation methods for:  
 - splitting global solar irradiance into the direct and diffuse parts;  
 - determining the solar irradiation on a surface of defined inclination and orientation.

**Title :** Machine tools. Environmental Product Declarations. Product category rules  
**Scope :** This document provides the rules, requirements, and guidelines for preparing an Environmental Product Declaration (EPD) for machine tools. It is based on the principles set forth in EN 14040 and EN 15025, modified to meet the specific needs of the machine families covered by the scope of this project. The scope of this project is multi-criteria, declaring multiple indicators of potential environmental impact, as well as indicators of resource use, waste production, and output flows. The aim is to prevent the transfer of environmental burden between environmental vectors. This project covers a common methodology for machine tools, supplemented by appendices that provide additional rules and guidance for machine types according to the manufacturing processes in which they participate (DIN 8580). It begins with the first two appendices, representing Group 3: Separation, Subgroup 3.2: Chip Removal, and Subgroup 3.4: Thermal Separation. This structure helps the machine tool sector, which has a very broad and diverse range of product categories. The objectives of this project are to ensure:  
 - The provision of a single, common methodological guide, facilitating methodological

---

- harmonization among machine tool types;
- The provision of specifications, additions, and deviations for subgroup 3.2 and subgroup 3.4;
  - The provision of verifiable and consistent data for an Environmental Product Declaration (EPD), based on a Life Cycle Assessment (LCA);
  - The provision of verifiable and consistent technical product data and/or potential use and end-of-life scenarios for the environmental performance of laser cutting and machining equipment;
  - The communication of multi-criteria environmental information for machine tools from the manufacturer to the consumer (B2B).

<b>ICS :</b>			
<b>National Ref :</b>	PNE 133100-8		
<b>Title :</b>	Infrastructures for telecommunication networks. Part 8: Telecommunications infrastructure for fiber optic-ready buildings		
<b>Scope :</b>	<p>This standard applies to telecommunications infrastructure for the adaptation of all buildings and property complexes, for residential, industrial, tertiary and public use, generally owned by a single owner, outside the scope of ICT regulations, and facilitates user connection to high-capacity networks.</p> <p>As an example, it covers buildings such as:</p> <ul style="list-style-type: none"> <li>• Administrative buildings</li> <li>• Hospitality buildings</li> <li>• Healthcare or social care buildings</li> <li>• Cultural buildings</li> <li>• Educational buildings</li> <li>• Sports facilities</li> <li>• Corporate buildings</li> <li>• Industrial buildings</li> <li>• Data centres</li> <li>• Social buildings</li> </ul>		

The above list is not exhaustive and includes any type of building for general purposes or whose use is a combination of the above.

Buildings indicated in the corresponding regulations as being historic, military, national security, etc. may be excluded.

This standard does not cover the design of indoor user networks for this type of building. It does cover certain cases in which there may be more than one entity or organisation in such buildings that may request fibre optic electronic communications services from operators, under regimes other than those established by ICT regulations.

The design specifications for telecommunications installations in single-family dwellings outside the scope of ICT are also established. In this case, indoor networks are covered. In addition to the requirements of this standard, all provisions established by the specific

---

regulations and directives applicable to them must be complied with.

Register issued on : 2026-03-06

## Sector 11AAAA: Health\_General

Sector :	11AAAA	Registration Date :	2026-02-09
Organization :	SN		
Country :	Norway		
Project ID :	NOT26001/0001		Project Established
ICS :	13.140, 17.140.20		
National Ref :	NS 4814		
Title :	Acoustics - Measurement of occupational noise exposure of workers - Area noise measurements and preparation of noise contour line maps		
Scope :	This document specifies methods for area noise measurements, including local sweeps and walk-through measurements, and the preparation of noise contour maps for workplaces. The documents specify methods for calculation of measurement uncertainty. The method takes into account variations in sound level over time. Measurements according to this standard are best suited for workspaces with sound sources that operate relatively regularly and are intended to support risk assessment, noise zone classification, communication disturbance evaluation, and decisions regarding hearing protection. The document is limited to measurements within the audible range.

## Sector 11MEDP: Medical equipment, pharmaceuticals and personal care products

Sector :	11MEDP	Registration Date :	2026-02-26
Organization :	UNI		
Country :	Italy		
Project ID :	01616501/0001		Project Established
ICS :	13.100		
National Ref :	UNI1616501		
Title :	Adoption and effective implementation of the Organizational and Management Models of health and safety - Asseveration procedure by Italian Joint Bodies		
Scope :	The standard provides operating procedures for all the industrial sectors, useful to the issue of the asseveration of the Organizational and Management Models (MOG) of the occupational health and safety adopted and effectively implemented. The standard provides also the text for the drafting of technical standards dealing with the asseveration procedures by the Joint Bodies (OP) of sectors connoted by specific needs.		
<b>Relatedness :</b>			
National :	REV/AMD UNI/TR 11709:2018		

Sector :	11MEDP	Registration Date :	2026-02-26
Organization :	UNI		
Country :	Italy		
Project ID :	01616502/0001		Project Established
ICS :	13.100		
National Ref :	UNI1616502		
Title :	Adoption and effective implementation of Health and Safety Organization and Management Models (MOG-SSL) – Part 1: Certification procedures in the building construction and civil engineering sectors		
Scope :	The standard defines the process for performing the certification service provided by Joint		

Bodies (OP) in the building construction or civil engineering sector, in order to ensure uniform procedures throughout the country, useful for certifying the adoption and effective implementation of companies' MOG-SSL (Organizational Model for Safety and Health). The subject matter of this standard stems from the experience gained with the application by the market of UNI/PdR 2:2013 "Operational guidelines for certification in the building construction and civil engineering sector" following the UNI/TR 11709:2018.
