**Title :** Requirements for irrigation of vegetation areas  
**Scope :** This document applies to the irrigation of public and private outdoor vegetation areas and serves as a basis for the calculation of the water quantity as well as the temporal distribution of the application. Excluded are contiguous lawns with an area of more than 1 ha according to ÖNORM EN 12484 (all parts). Also excluded are areas used for agriculture and forestry, sports fields according to ÖNORM B 2606-1 and production areas for plants or plant parts (e.g. tree nurseries, market gardens). This document does not cover fertilisation and plant protection measures in the course of irrigation.

**Title :** Rubber, vulcanized or thermoplastic - Determination of abrasion resistance using a rotating cylindrical drum device (ISO 4649:2024)  
**Scope :** This document specifies two methods for the determination of the resistance of rubber to abrasion by means of a rotating cylindrical drum device.  
 The methods involve determination of the volume loss due to the abrasive action of rubbing a test piece over a specified grade of abrasive sheet. Method A is for a non-rotating test piece and method B is for a rotating test piece. For each method, the result can be reported as a relative volume loss or an abrasion resistance index.

Title :

Precision of geometric parameters in building industry. General requirements and construction tolerances

Scope :

This standard applies to the design and realization of building objects and to the design and production of building structures, products and elements. It establishes the basic accuracy characteristics and the requirements regarding the determination, technological assurance, control and accuracy assessment of geometric parameters that guarantee compliance with the functional requirements for the building objects and their parts at all stages of their designing and implementing. It also applies to the design, implementation and operation of building objects and their parts and establishes the basic determination of functional tolerances, their nomenclature and values.

 National Ref : ÖNORM DIN 18202  
 Title : Tolerances in building construction - Buildings, design and testing  
 Scope : The purpose of this document is to establish basic principles for tolerances and their testing. The tolerances specified in this document represent the accuracy that can be achieved with normal care. They apply in all cases unless other levels of accuracy are agreed. The document applies to both the manufacture of components and the execution of structures. The tolerances specified in this document for the execution of structures apply regardless of the building material used.

**Title :** Concrete testing — Hardened concrete — Freeze-thaw scaling incl. specimen production and assessment  
**Scope :** This document specifies methods for determining the resistance of concrete to surface scaling under repeated freezing and thawing.

The methods include freezing in contact with a salt solution or deionized water carried out on either uncarbonated or carbonated surfaces.

This document also specifies requirements for the production, storage, and transport of concrete test specimens, intended to be used for determining the resistance of concrete to freezing, both testing during concrete production and testing of finished concrete structures.

**Title :** Timber Buildings - Technical requirements  
**Scope :** This document contains technical requirements for the production and construction of timber buildings. The main parts of the wall-, floor- and roof constructions are made by wood and/or wood-based materials. The present document applies to residential houses and timber buildings with similar room climatic conditions and uses as in residential buildings (e.g. office buildings, schools, kindergartens, dormitories, hotels). The standard is valid for timber frame-, post and beam- or massive wood constructions. If buildings are partly built using timber, the requirements in this document apply accordingly.

**\*\* End of Subsector \*\*****Sector 07GASD: Gas distribution and related services**

---

**Sector :** 07GASD **Registration Date :** 2026-03-30
**Organization :** UNI**Country :** Italy**Project ID :** 01616772/0001 Project  
Established**ICS :** 23.040.60**National Ref :** UNI1616772**Title :** Gas Infrastructure – Pressure Control and Gas Measurement Stations Connected to Transmission Grids – Part 2: Monitoring of Measurement Systems

**Scope :** The standard defines the operating procedures for monitoring measurement systems in order to ensure the required level of measurement accuracy and system reliability/safety throughout the expected technical lifetime.

It applies to natural gas measurement systems with a density not exceeding 0.8, with reference to UNI 9167-3, and that are connected to the transport network and installed in:

- a. Interconnection points with foreign transport systems;
- b. Entry and exit points to and from storage sites;
- c. Entry points from indigenous productions and biomethane productions;
- d. Entry points from LNG regasification terminals and boil-off from LNG storage facilities;
- e. Interconnection points between transport networks;
- f. points connected to distribution networks (DSO) and end customers directly connected to the transport network.

For biomethane feed-in measurement systems, in addition to the requirements of this standard, the relevant requirements are defined in UNI/TS 11537.

The standard supplements the provisions of UNI 9571-1 and Resolution 512/2021/R/gas regarding measurement monitoring.

The standard also applies to plants built, installed and operated prior to its application

**ICS :**  
**National Ref :** PNE 71407 EX  
**Title :** Guidance for simplifying the adoption of regulations in systems that use artificial intelligence and other information technologies  
**Scope :** The objective of this standard is to guide and orient all types of organizations (public administrations, institutions, corporations, SMEs, micro-SMEs, universities, non-profit organizations, independent professionals, etc.) on how to rigorously and efficiently adopt and integrate the multiple requirements demanded by regulations (laws, regulations, standards, etc.) for systems using artificial intelligence and other disruptive technologies and frameworks, in order to comply with legal requirements, market demands, or internal policies.  
 Therefore, this standard does not generate new requirements, but rather serves as an aid and guide to organizations on how to adopt and integrate different sources of requirements. It develops a working model that facilitates the identification, integration, and implementation of requirements to ensure rigorous compliance with laws, regulations, and standards in organizations. This standard does not constitute a legal compliance management system; it is a technical guidance document.  
 The scope of application of this technical specification focuses on all types and sizes of organizations, for all types of activities, and for any department (information technology, human resources, commercial, operations, etc.). It focuses on helping to efficiently apply regulations that make the significant transformative potential of disruptions more ethical, humane, and acceptable to society.

**Title :** Reference framework for the application of Artificial Intelligence to Professional Productivity and Time Management

---

**Scope :** The objective of this standard, a Technical Specification, is to define a reference framework for the application of Artificial Intelligence solutions in order to improve time management and professional productivity in the areas of information technology, but also extendable to other areas of organizations.

This new standard focuses on identifying specific use cases, guidelines, and recommendations for integrating AI tools at different levels of the organization (individual-team-department) and in the task workflow (receive-plan-execute-deliver) defined in the UNE 71404 standard "Reference model for professional productivity in the digital age in the areas of IT."
