Title : Street Space
Scope : The scope of the standard covers street space in densely populated areas, i.e. roads and streets in public use (including roads within settlements) and other public spaces that connect different places and enable people (including vehicle users) to move around, meet and spend time in a shared space. This also includes private roads that are accessible to the public.
Street space is a functional and spatial whole that may be delimited by buildings or other structures, barriers or landscape elements and may not necessarily coincide with property boundaries.

This standard describes and prescribes a design procedure that allows the achievement of the appropriate lighting category/ies, starting from data associated with the type of the road and which they are the input values for the procedure.

This design procedure is based on a subtractive process which allows to set up both the Design lighting category and the Operational lighting category, as a result of a risk assessment carried out by the designer which evaluates the influencing parameters.

This standard defines the functionalities and the classification of the systems able to activate adaptive lighting conditions, also establishing typical requirements and operating modes.

Title : Rolling bearings — Radial bearings — Geometrical product specifications (GPS) and tolerance values
Scope : This document specifies dimensional and geometrical characteristics, deviation limits from nominal sizes, and tolerance values to define the interface (except chamfers) of radial rolling bearings. Nominal boundary dimensions are defined in (ÖNORM) ISO 15, (ÖNORM) ISO 355 and (ÖNORM) ISO 8443.
 This document does not apply to certain radial bearings of particular types (e.g. needle roller bearings) or for particular fields of application (e.g. airframe bearings). Tolerances for such bearings are given in the relevant International Standards.
 Chamfer dimension limits are given in ISO 582.

Title : Aerodynamics in the railway sector – Reference scenarios for identifying the aerodynamic loads of passenger trains operating on Italian lines at speeds exceeding 200 km/h
Scope : The document describes the national reference scenarios which, in relation to vehicle characteristics, enable the calculation of the aerodynamic loads to which passenger rail vehicles travelling on the Italian national network may be subjected, for the purpose of their correct dimensioning. The document does not intend to define a specific assignment of maximum static and fatigue aerodynamic loads.
The reference scenarios are representative of the characteristics of the Italian network at the date of publication of this document, in particular the dimensional characteristics of tunnels (their lengths and cross-sections) and operations (number of train crossings and type of crossing trains).
The document refers to the circulation of passenger rail vehicles travelling on sections of the national network where the line speed at the date of publication of this document is greater than 200 km/h, for which it is necessary to identify the reference scenarios as indicated in UNI EN 14067-5:2023.

91.140.60**National Ref :** ÖNORM B 5024-3**Title :** Valuation basis for materials in drinking water applications - Part 3: Metallic materials**Scope :** This document specifies material categories that have been tested in accordance with ÖNORM B 5014-3:2017, Clause 7.

In addition, materials deemed suitable from the perspective of drinking water hygiene are listed, which have been tested and positively assessed in accordance with ÖNORM B 5014-3:2017, Clauses 8.2 and 8.3. The use of materials may be restricted to specific types of drinking water. Further details are given in ÖNORM B 5014-3.

The metallic materials listed in this document may be used for products, taking into account their intended fields of application, without the need to examine the release of metals from the products into drinking water, as suitability had already been demonstrated for inclusion in this document. However, if the materials are provided with a non-listed coating or surface treatment (e.g. chromium plating) on surfaces in contact with water, an additional test of the metal release from the product is required.

Corrosion processes leading to damage of components, as well as corrosion protection measures, are not within the scope of this document.

ICS : 17.140.01
National Ref : UNI1616888
Title : Acoustics - Planning and management of construction site noise - Guidelines for the tender authority including instructions for the contractor
Scope : The standard provides requirements and guidelines for noise planning and management on construction sites, with the aim of minimising noise pollution. The standard defines specific responsibilities for the client (who must prescribe electrical machinery, acoustic shielding and monitoring systems) and for the contractor (who must draw up and implement an Integrated Noise Management Plan - PGRUM). The integrated approach aims to create construction sites that produce perceptibly lower noise levels than traditional construction sites.

Title : Vibration – Unattended vibration monitoring for the assessment of annoyance to people and architectural damage to buildings
Scope : This standard determines the mode of vibration measurement for the purpose of assessing annoyance to people (see UNI 9614), architectural damage to buildings (see UNI 9916), structural variations and other assessments where observation for extended periods and/or in the absence of an operator is useful or necessary. This standard does not apply where other specific standards exist which also cover the aspects covered by this standard.

Title : Furniture – Definitions and classification of workmanship finishing defects of elements processed through edge banding operations
Scope : The standard defines and classifies the aesthetic imperfections resulting from the edge banding process of panels used in furniture manufacturing.
 It describes the main defects related to different processing stages and components of the panel-edge system (panel, edge, glue line, edges), providing a common terminology and identification criteria useful for quality control and for technical and commercial communication between manufacturers, subcontractors and customers.
