Title : Sustainable cities and communities - assessment of urban regeneration projects
Scope : Sustainable urban regeneration involves complex material and immaterial interventions that go beyond the renewal of physical elements, encompassing a wide range of changes related to the social, economic and environmental conditions of urban areas.

A sustainable urban regeneration process includes social, economic, physical and environmental dimensions, as well as aspects of governance and coordination among the actors involved. These dimensions can be considered and assessed from an ESG (Environmental, Social and Governance) perspective (UN-Habitat, 2021).

The aim of the standard is to define criteria for assessing the sustainability of urban regeneration projects and to propose a different guiding approach aligned with ESG criteria.

Title : Economic comparison calculation of energy systems based on dynamic calculation methods - National supplement and national explanations to ÖNORM EN 15459-1

Scope : This ÖNORM standard applies to the economic comparison of several energy systems available for selection, consisting of several components with variable parameters and all cost types necessary for the comparison, using a dynamic economic analysis, and specifies the national options required in ÖNORM EN 15459-1.
This ÖNORM can be applied to all energy systems for all types of buildings and facilities, with a particular focus on heating, cooling, air conditioning, ventilation and hot water preparation.

The calculation method of this ÖNORM can be applied to the selection and tendering of energy systems in existing buildings and new buildings. Furthermore, it can be used in connection with the determination of the cost-optimal level of energy systems in existing buildings and new buildings.

The calculation method of this ÖNORM can be used for the selection and tendering of energy systems in existing buildings and new buildings. Furthermore, it can be used in connection with the determination of the cost-optimal level and for assessing the economic efficiency of a measure in the field of building services in accordance with Directive (EU) 2018/844 and its national implementation documents.

Title : Radon - Part 2: Structurally engineered preventive measures for buildings
Scope : This document applies to the planning and construction of small- and large-scale new buildings and extensions intended for residential, work, and occupancy purposes (e.g., residential houses, schools, kindergartens, workplaces, industrial buildings). It also applies to renovations where horizontal, ground-contacting components down to the ground level (foundation level) are newly constructed (with very low effort required for radon precautionary measures).
 This document provides planners and construction professionals with the currently available minimum requirements for radon precautionary measures in accordance with the current state of the art. The use of the methods and materials presented here requires technical construction expertise.

Title : Fine ceramics (advanced ceramics, advanced technical ceramics) — Silicon nitride materials for rolling bearing balls and rollers (ISO 26602:2017)

Scope : This document specifies the requirements for preprocessed silicon nitride materials for rolling bearing balls and rollers.

This document provides a classification defining physical and mechanical properties of silicon nitride preprocessed bearing rolling element materials. The materials are classified in three categories by the specification of characteristics and microstructures. Methods for sample preparation and observation of microstructures are provided in Annex A.

NOTE 1 The silicon nitride product means the sintered body of which the main component is silicon nitride material.

NOTE 2 This document can be used for processed rolling bearing balls and rollers upon consultation between the parties concerned.

 Title : Softwood bark and wood chips. Phytosanitary heat treatment for the elimination of the pinewood nematode (*Bursaphelenchus xylophilus*) and other harmful organisms.
 Scope : This standard sets out the procedures for heat treatment to eliminate the pine wood nematode (PWN), *Bursaphelenchus xylophilus*, and other harmful organisms, in particular its insect vector, from the bark and wood chips of coniferous species. It also sets out the conditions that must be met for the issue of the necessary legal documents certifying the effectiveness of the treatment of bark and wood chips, which the National Plant Protection Organisation (ONPP) issues to economic operators.
 The procedures set out in this standard apply to the treatment of screened bark or wood chips with a size of 5 mm or greater.

Title : Water quality - Minimum requirements for the selection, installation, validation, and operation of continuous measuring devices - National Amendment

Scope : This document specifies requirements for the selection, installation, validation, and operation of continuous measuring devices (CMDs) as follows:

- 1) Selection: defining the user requirements, the purposes of the required measurements, associated data quality requirements, and choice of (CMDs).
- 2) Installation: verifying a complete and correct delivery of the procured CMD and verifying a correctly functioning on-site installation, operation and communication of the CMD.
- 3) Validation: verifying that the correctly installed CMD meets all of the original defined user requirements.
- 4) Operation: implementing operating and maintenance procedures, processing of data and document traceability.

The overall objective is to obtain representative and reliable measurements when using CMDs to monitor water quality.

This document is applicable to CMDs for monitoring physical and chemical parameters in different types of water.

ICS :			
National Ref :	PNE 202009-28		
Title :	Methodology for verification and inspection of low voltage electrical installations at communal facilities.		
Scope :	This standard is intended to provide criteria for the verification and inspection of low-voltage electrical installations in public premises:		

- by providing a methodology for verification/inspection; and
- by providing documentation for recording the conditions and values of the verification/inspection (non-conformities observed, damage, deterioration and hazardous conditions, etc.).

The results of the verifications/inspections must define the corrective actions to be taken to comply with the minimum safety requirements for this type of installation.

This standard applies to all electrical installations in public premises.

Public premises may include special-purpose premises whose electrical installations are affected by ITC-BT standards other than ITC-BT 28 (e.g. operating theatres and procedure rooms, etc.). For such installations, the relevant parts of the UNE 202009 series of standards must also be used.

Title :	Methodology for the verification and inspection of low voltage electrical installations in operating theatres and intervention rooms.		
Scope :	This standard is intended to provide criteria for the verification and inspection of low-voltage electrical installations in operating theatres and procedure rooms:		

- by providing a methodology for verification/inspection; and
- providing documentation for recording the conditions and values of the verification/inspection (non-conformities observed, damage, deterioration and hazardous conditions, etc.).

The results of the verifications/inspections must define the corrective actions to be taken to comply with the minimum safety requirements for this type of installation.

This standard applies to electrical installations in operating theatres and procedure rooms covered by ITC BT 38 of the REBT of 2002, whether they are powered by an isolation transformer or not (group 2 or group 1).

This standard also includes checking the maintenance logbook for the checks to be carried out before and after the installation is put into service.

Operating theatres and procedure rooms may be included in locations affected by ITC-BT standards other than ITC-BT 38 (e.g. public buildings, etc.). For such installations, the relevant parts of the UNE 202009 series of standards must also be used.

Title : Textiles. Fabric tear strengt by punching elements.

Scope : The purpose of this standard is to describe a method to determine the resistance to tearing or rupture of fabrics by hooking of sharp elements (nails, barbed wire, etc.).

The test is mainly applied to woven fabrics. It can be applied to fabrics produced by other techniques such as non-woven fabrics (with the same restrictions as those cited below for woven fabrics).

In general, the method is not applied to knitted fabrics and elastic fabrics. It is not suitable for highly anisotropic fabrics or for lightly dense fabrics where tear propagation in the opposite direction is likely to occur.

Title :	Non-regulated professions - Professional profiles Human resources - Knowledge, skill, autonomy and responsibility requirements		
Scope :	<p>The standard defines the requirements for the professional activities of Human Resources roles across a wide range of organisational contexts, both private and public. These requirements, derived from an analysis of tasks and activities and the mapping of their associated content, are set out in terms of knowledge and skills, and enable the determination of levels of autonomy and responsibility in line with the National Qualifications Framework (QNQ). The specifications are formulated to support more consistent and transparent conformity assessment processes. This document represents the second stage in the process of transforming UNI/PdR 17:2016 “Professional profiles in the Human Resources function of organisations – Definition of knowledge, skills and competence requirements and operational guidelines for conformity assessment” into a standard.</p>
